The product descriptions below provide brief explanations of the functionality and intended use of each listed products in the rATA questionnaire. These descriptions, together with the product images, are intended to support the training of the enumerators and the field data collection. The national team may adapt the product descriptions and images to the local context.

Mobility products:

☐101 = Auxillary / Elbow crutches are walking aids with elbow, underarm or forearm support and a single shaft that is often fitted with a tip (also called a ferrule). A single crutch or a pair of crutches are intended to support balance or weight-bearing when standing or walking.

☐102 = Canes/sticks, tripod and quadripod are walking aids with a handgrip and a single shaft, which has one, three or four tips, sometimes fitted with tips and often height-adjustable. Sometimes, a very basic stick without modifications is used in place of a commercial product. A tripod (3 tips) or quadripod (4 tips) may be used by people who need additional support for balance and/or weight-bearing when standing or walking.

☐103 = Club foot braces are used to help manage 'club foot' which is a condition some children are born with. The braces look like a pair of modified shoes, attached by a solid bar. The braces position the feet to help a process of correcting their shape and position.

☐104 = Manual wheelchairs - basic type for active users are intended to be self-propelled by the users by pushing rims or wheels. Can be used for both indoor and outdoor and on various types of terrains.

☐105 = Wheelchairs, manual with postural support can be adjusted to the individual users who require variable tilt and/or recline on manual wheelchairs. For users who self-propel or need to be assisted in both indoor and outdoor on various terrains.

☐106 = Manual wheelchairs - push type, are for users who can sit upright and balanced without additional support and need to be pushed by an attendant. For intermittent use for short duration transportation both indoors and outdoors.

☐107 = Wheelchairs, electrically powered are wheelchairs powered by batteries.

☐108 = Orthoses (upper limb), sometimes called braces, are devices that encompass part of upper limb (arm).

☐109 = Orthoses (lower limb), sometimes called braces or calipers, are devices that encompass part of lower limb (leg).

☐110 = Orthoses (spinal) are designed to hold the spine in place. It can help avoid unwanted spinal changes, reduce pain, hold the spine after a fracture or surgery. Different versions are used for different functions. They include neck braces and a variety of products that affect the rest of the trunk and spine.

□111 = Pressure relief cushions are to provide support for positioning/stability and reduced sheer, protection of skin and soft tissues, improved comfort.

□112 = Pressure relief mattresses are to prevent pressure injuries by dispersing pressure away from bone protrusions. Used lying down, as a bed.

□113 = Prostheses (lower limb) are devices that replace part of the lower limb after amputation or in cases of limb deficiency.

□114 = Prostheses (upper limb) are devices that replace part of the upper limb after amputation or in cases of limb deficiency.

□115 = Rollators are walking aids with wheels/casters that can be moved by pushing or pulling. It is intended to be used by people to support balance or weight-bearing when standing or walking.

□116 = Walking frames/walkers are walking aids with either four shafts or two shafts and (sometimes) two small wheels (also called castors), which are lifted or pushed by the user. They are intended for use by people to support balance or weight-bearing when standing or walking.

□117 = Therapeutic footwear (diabetic, neuropathic, orthopedic) are footwears (for at-risk feet or feet that do not suit commercial shoes) to take the pressure off problem areas, provide support and protection, and to prevent other problems.

□118 = Fall detectors are devices to detect falls of the user who wears the device and trigger an alert to a carer or a monitoring center.

□119 = Standing frames, adjustable are devices that provide adjustable full body support option for children with a range of mobility and developmental delays.

□120 = Tricycles, trikes or three-wheeled cycles, are for greater mobility and mostly for outdoor use, often modified with different propulsion (like hand cranks or levers) to accommodate lower limb or spinal impairments.

Seeing/vision products:

□201 = Audio-players with DAISY capability are devices to play and display audio and visual information including sound, text and pictures. They are intended for use by people who are blind, have very low vision or are unable to read for other reasons. They can be stand-alone players, or software on a computer.

□202 = Braille displays (note takers) are electro-mechanical devices for displaying braille characters, usually by means of round-tipped pins raised through holes in a flat surface.

□203 = Braille writing equipment/Braillers are devices to produce embossed Braille characters on paper. They are intended for use by people with blindness or low vision.

□204 = Magnifiers, digital handheld, are portable devices that display an enlarged image of a close object captured by a video camera. They may be used by people with low vision that cannot be fully corrected with spectacles or other treatment such as surgery.

□205 = Magnifiers, optical are devices to produce enlarged (magnified) images of close objects and print. They may be used by people with low vision that cannot be fully corrected with spectacles or other treatment such as surgery.

□206 = Spectacles; low-vision, short/long distance/filters are eyeglasses that help correct refractive errors or support low vision by adjusting or magnifying what the eye sees.

□207= Watches, talking/touching are timekeeping devices that give the time verbally or enables the users to know the time by touching the watch face They are intended for use by people with blindness or low vision.

□208 = White canes are long rod-like devices used by people with blindness or low vision, to give them information about the environment around them. A cane can warn of obstacles in their path, stairs they are coming to, an approaching curb and many other aspects of their environment that must be dealt with. White canes often fold up for convenience and have plastic rolling tips to help them move over rough, uneven surfaces.

□209 = Smart phones/tablets/PDA or other smart mobile devices with dedicated software/ applications that support people with functional difficulties in their daily activities. Such devices and applications are commonly developed to support vision, hearing, cognition and communication.

□210 = Deafblind communicators are devices that consist of a Braille note-taker linked by Bluetooth to a mobile phone.

□211 = Gesture to voice technology are to convert sign language into speech and speech into text or sign language.

Hearing products:

□301 = Alarm signalers with light/sound/vibration are to alert people to imminent danger (such as smoke, fire or a security breach) and they can also draw attention to everyday events such as a doorbell or baby's cry. They are intended for use by people who are deaf or hard of hearing.

□302 = Hearing aids (digital) and batteries are devices, usually worn behind the ear of the user to amplify sound.

□303 = Closed captioning displays are to convert the audio portion of the television program into written words, which appear in a window on the screen.

□304 = Smart phones/tablets/PDA: see 209.

□305 = Deafblind communicators: see 210.

□306 = Hearing loops/FM systems are devices to improve the signal-to-noise ratio (SNR) for people with hearing difficulties to overcome the negative effects of talker distance, ambient noise and reverberation in an environment such as in a school classroom.

□307 = Video communication devices are specific devices (not a phone/PDA/tablet) that allow for interaction achieved by means of a video link.

Communication:

□401 = Smart phones/tablets/PDA: see 209.

□402 = Communication boards/books/cards are devices enable people to communicate using symbols, words, pictures or objects represented on a board. The users look at, point to, or otherwise select items on the communication board. Communication boards add to or replace spoken communication. They are intended for use by people with limited or no spoken communication.

□403 = Communication software are Augmentative and Alternative Communication (AAC) applications for smartphones, tablets or computers to facilitate communication.

□404 = Recorders are portable devices that can record, store, and replay audible information to facilitate the recall of facts or appointments.

Cognition:

□501 = Pill organizers are devices to help people to take their medications in the correct dosages at the correct time and to prevent adverse drug events (such as missed doses or overdoses). They are intended to store the users' prescribed medications, to notify them when the medications are due to be taken, and to monitor whether the user took the medication.

□502 = Smart phones/tablets/PDA: see 209.

□503 = Global Positioning System (GPS) locators are GPS tracking devices integrated in a watch or in another object that can be carried by the users.

☐504 = Personal emergency alarm systems are devices either operated by the user or activated automatically in case of personal emergency to notify the user or obtain help from another individual or service.

☐505 = Simplified mobile phones are easy to use mobile phones, for example, with easy interface, big buttons for facilitating calling or texting, etc.

☐506 = Time management products are devices that support ordering events in chronological sequence and allocating amounts of time to events and activities.

☐507 = Travel aids, portable are products that support users to travel from one location to another, with route data and information on public transportation services, payments and outdoor navigation.

Self-care:

☐601 = Chairs for shower/bath/toilet provide solutions for people who find it difficult or impossible to use a standard toilet or shower. Users may need support to transfer on/off the chair and when washing and drying themselves.

☐602 = Grab-bars / Hand rails are bars attached to a wall, floor or other stable structure that provide the means for support or stabilization. They are intended for use by people who need support or assistance when moving between lying, sitting, standing and while standing or moving around in indoor or outdoor environments.

☐603 = Incontinence products, absorbent, are products to move moisture away from the skin, to absorb and contain moderate or heavy urine loss and/or faeces. They are to protect users' clothes and nearby environment, thereby preserving the users' dignity, comfort, health and quality of life, and (if applicable) that of their caregiver(s)).

☐604 = Ramps, portable, are moveable sloping surface that bridges a limited gap between two levels. They are intended to assist people, who use wheelchairs, strollers, carts or other wheeled objects, to move up and down stairs, access to and within a home or other building over a maximum of two steps, access to a vehicle or moving in rough terrain.

☐605 = Keyboard and mouse emulation software reproduce the keyboard on the device screen and/or allow control of mouse pointer movement and/or click functions.

☐606 = Screen readers are software that interpret what is being displayed on the screen and present it to the users with text-to-speech, sound icons, or a Braille output.
