Health in All Policies - discussion session on Wednesday

Dear all,

Thank you for actively participating in the HIAP exercise. Coming Wednesday, Lesley Onyon, from WHO's Regional Office for South-East Asia, will facilitate the activity during lunchtime. During this session you can introduce other chemicals of public health concern, and actively debate which sectors should be involved in the management of that specific chemical. Please bring a colleague from another sector to increase multisectoral discussion.

The Health in All Policies activity, with input from a participant

A delegate from Poland identified various stakeholders to be involved in the management of guidance and legal frameworks on the use, management and trade of highly hazardous pesticides.

A delegate from Morocco provided input on the management of mercury use in thermometers and sphygmomanometers, and the presence of asbestos in building waste.
