

Introducing WHO & UNICEF's new electronic Joint Reporting Form (eJRF)!

World Health
Organization

INTRODUCING THE eJRF

WHO, PAHO, UNICEF, and partners have worked together to create a secure electronic Joint Reporting Form (eJRF) on Immunization to replace the current Excel workbook. The eJRF provides a better user experience with faster and more secure data transmission.

By removing errors caused with version control, the eJRF produces more accurate immunization data for everyone. The annual immunization data are now easier to enter, validate, and manage.

The eJRF was piloted by twelve countries in 2020 and is ready for the rest of the world in 2021.

KEY FEATURES

- ✓ Pre-populated historical data
- ✓ Ability to add historical data
- ✓ Real-time validation checks
- ✓ Collaborative environment for multiple users
- ✓ Ability to make comments and receive feedback
- ✓ Dynamic questions based on your answers
- ✓ Automatic calculations, when possible
- ✓ Monitor the review process
- ✓ Embedded training & support
- ✓ Easy navigation
- ✓ Secure collection and transmission of data

HOW IT WORKS
