Unsafe medication practices and medication errors are a leading cause of injury and avoidable harm in health care systems across the world.

WHO has launched the **WHO Global Patient Safety Challenge: *Medication Without Harm*** to improve medication safety. Considering the huge burden of medication-related harm, **Medication Safety** has also been selected as the **theme for World Patient Safety Day 2022**.

WHO is launching a series of webinars to introduce the strategic framework, technical strategies and tools to provide technical support for implementation of *the Challenge*. The webinars will share country and patient experiences in implementing the *Challenge*.

This opening webinar will set out the urgency to address *the Challenge*.

Simultaneous interpretation will be available in English, French, Russian and Spanish.
