Ensuring medication safety in polypharmacy is one of the critical challenges in medication safety. Inappropriate Polypharmacy has been described as a significant public health challenge, as it increases the likelihood of adverse effects, considerably impacting health outcomes and expenditure on health care resources.

Countries need to prioritize raising awareness of the problems associated with inappropriate polypharmacy and the need to address this issue. All stakeholders have a vital role in driving change for the management of polypharmacy.

At this webinar, we will introduce the WHO technical report on “Medication Safety in Polypharmacy”, and experiences from different countries and organizations will be shared on the proper management of polypharmacy and the factors that influence appropriate polypharmacy.

The session will be available in English, French and Spanish.
