

Coronavirus Disease 2019 (COVID-19)

Situation Report – 76

Timor-Leste

Data as reported by 02 December 2020

HIGHLIGHTS

- A new case of COVID-19 was reported on 2nd Dec 2020. This takes the total tally of COVID-19 cases in Timor-Leste to 31.
- UNICEF participated in the immunization technical working group chaired by the National Director of Public Health. The working group review the COVAX vaccine application to COVAX facility for 20% of the total population with COVID-19 vaccine. There were some action points developed to follow up with the key decision-makers for the introduction of COVID-19 vaccine.
- The MoH with support from UNICEF, WHO, World Bank, and Australian Embassy is working to strategise the COVID-19 vaccine deployment. Critical decisions such as the establishment of the national coordination committee, presenting the COVID-19 vaccine deployment plan to the council of minister for endorsement and identifying teams to finalize the COVAX vaccine application are on the anvil.
- UNICEF assisted the Director of Policy and Partnership Cabinet together with WHO, DFAT and other partners to develop the term of reference for the national coordinating committee for the COVID-19 vaccine deployment. The team also came up with a policy brief on the COVID-19 vaccine deployment to be used for the presentation in the council of ministers on 2nd December 2020.
- The MoH with partners like WHO, UNFPA, and several other civil society organisation, and private sector stakeholders commemorated the World AIDS Day. The national theme for the AIDS day commemoration was “Know your statu; get tested; stop transmission.” The world has made significant progress since the late 1990s, but HIV remains a major global public health issue. And like many other major health issues, it faces additional challenges during the COVID-19 pandemic.

SITUATION IN NUMBERS

31 confirmed (1 new)
0 deaths

(As per data released by the
[Ministry of Health](#))

WHO TIMOR-LESTE STRATEGIC OBJECTIVES

- Interrupt human-to-human transmission including reducing secondary infections among close contacts and health care workers, preventing transmission amplification events;
 - Strengthening of surveillance systems and increasing laboratory capacity to detect COVID-19 cases;
 - Ensuring adherence to the strictest standards of infection prevention and control (IPC) and increase capacity for IPC;
 - Identify, isolate and care for patients early, including providing optimized care for infected patients;
 - Communicate critical risk and event information to all communities and counter misinformation;
 - Minimize social and economic impact through multisectoral partnerships.
-

RECOMMENDATIONS AND ADVICE FOR THE PUBLIC

Wash your hands frequently

Regularly and thoroughly clean your hands with an alcohol-based hand rub or wash them with soap and water.

Why? Washing your hands with soap and water or using alcohol-based hand rub kills viruses that may be on your hands.

Maintain physical distancing

Maintain at least 1 metre (3 feet) distance between yourself and others.

Why? When someone coughs or sneezes they spray small liquid droplets from their nose or mouth which may contain virus. If you are too close, you can breathe in the droplets, including the COVID-19 virus if the person coughing is infected.

Use face mask when physical distancing is not possible

Why? If when you're in a setting where maintaining the physical distance of 1 meter or more is not possible due to the space constraint, then it is imperative that you use a face mask as it can help in stopping the transmission of COVID-19

Avoid touching eyes, nose and mouth

Why? Hands touch many surfaces and can pick up viruses. Once contaminated, hands can transfer the virus to your eyes, nose or mouth. From there, the virus can enter your body and make you sick.

Practice respiratory hygiene

Make sure you, and the people around you, follow good respiratory hygiene. This means covering your mouth and nose with your bent elbow or tissue when you cough or sneeze. Then dispose of the used tissue safely immediately.

Why? Droplets spread virus. By following good respiratory hygiene you protect the people around you from viruses such as cold, flu and COVID-19.

If you have fever, cough and difficulty breathing, seek medical care early

Stay home if you feel unwell. If you have a fever, cough and difficulty breathing, seek medical attention and call in advance. Follow the directions of health authorities.

Why? Calling in advance will allow your health care provider to quickly direct you to the right health facility. This will also protect you and help prevent spread of viruses and other infections.

Stay informed and follow advice given by your healthcare provider

Stay informed on the latest developments about COVID-19. Follow advice given by your healthcare provider, your national and local public health authority or your employer on how to protect yourself and others from COVID-19.

Why? National and local authorities will have the most up to date information on whether COVID-19 is spreading in your area. They are best placed to advise on what people in your area should be doing to protect themselves.

Protect ourselves and our loved ones against #COVID19:

- ✚ **Wash your hands frequently**
- ✚ **Cover coughs and sneezes**
- ✚ **Avoid touching your face**
- ✚ **Avoid crowded places and limit time in enclosed spaces**
- ✚ **Keep a distance of at least 1 metre from others**
- ✚ **Use of mask is imperative when physical-distancing is not possible.**
- ✚ **Regularly clean and disinfect frequently touched objects and surfaces**
- ✚ **Isolate yourself from others if feeling unwell and seek care, if needed**
