

# Coronavirus Disease 2019 (COVID-19)

## Situation Report – 65

### Timor-Leste

Data as reported by 16 September 2020

#### HIGHLIGHTS

- To further strengthen the COVID-19 pandemic response, WHO supported the National Health Laboratory (NHL) another fully automated RT-PCR machine, reagents and other consumables for COVID-19 testing to the National Health Laboratory (NHL). The Real Time Polymerase Chain Reaction (RT-PCR) test is used to detect and diagnose COVID-19. This is the third RT-PCR machine handed over by WHO to the National Health Lab (NHL).
- Maintaining a safe and adequate blood supply during the COVID-19 pandemic is crucial. It is important to be prepared and respond quickly and take key actions to mitigate the potential risk to the safety and sufficiency of the blood supplies during the pandemic. WHO handed over Anti-A Monoclonal, Anti-B Monoclonal, Anti-A, B Monoclonal and Anti-D Monoclonal reagents to the National Blood Bank. These Reagents are used to determine blood type of each individual (Blood Type A, B, AB or O).
- To strengthen food safety and quality testing, WHO supported NHL by providing reagents and chemicals for Atomic Absorption Spectrophotometer (AAS) & High-Performance Liquid Chromatography (HPLC) to test chemical additives & agents in food. In the past, WHO Timor-Leste, partnering with Royal Thai Embassy, Dili and Faculty of Medicine Ramathibodi Hospital organized training for the NHL personnel on the use of these two machines.

#### SITUATION IN NUMBERS

**27 confirmed (0 new)**

**0 deaths**

(As per data released by the [Ministry of Health](#))

Follow WHO Timor-Leste on [Facebook](#) and [Twitter](#).

More information and guidance by WHO regarding the current COVID-19 outbreak can be found [here](#).

#### GLOBAL SITUATION IN NUMBERS

**Total (new) cases in last seven days**

##### Globally

**28 637 952 confirmed (1 844 959)**

**917 417 deaths (40 656)**

#### WHO RISK ASSESSMENT

Global Level    **Very High**

## WHO TIMOR-LESTE STRATEGIC OBJECTIVES

- Interrupt human-to-human transmission including reducing secondary infections among close contacts and health care workers, preventing transmission amplification events;
- Strengthening of surveillance systems and increasing laboratory capacity to detect COVID-19 cases;
- Ensuring adherence to the strictest standards of infection prevention and control (IPC) and increase capacity for IPC;
- Identify, isolate and care for patients early, including providing optimized care for infected patients;
- Communicate critical risk and event information to all communities and counter misinformation;
- Minimize social and economic impact through multisectoral partnerships.

## RECOMMENDATIONS AND ADVICE FOR THE PUBLIC

### Wash your hands frequently

Regularly and thoroughly clean your hands with an alcohol-based hand rub or wash them with soap and water.

**Why?** Washing your hands with soap and water or using alcohol-based hand rub kills viruses that may be on your hands.

**Maintain physical distancing**

Maintain at least 1 metre (3 feet) distance between yourself and others.

**Why?** When someone coughs or sneezes they spray small liquid droplets from their nose or mouth which may contain virus. If you are too close, you can breathe in the droplets, including the COVID-19 virus if the person coughing is infected.

**Use face mask when physical distancing is not possible**

**Why?** If when you're in a setting where maintaining the physical distance of 1 meter or more is not possible due to the space constraint, then it is imperative that you use a face mask as it can help in stopping the transmission of COVID-19

**Avoid touching eyes, nose and mouth**

**Why?** Hands touch many surfaces and can pick up viruses. Once contaminated, hands can transfer the virus to your eyes, nose or mouth. From there, the virus can enter your body and make you sick.

**Practice respiratory hygiene**

Make sure you, and the people around you, follow good respiratory hygiene. This means covering your mouth and nose with your bent elbow or tissue when you cough or sneeze. Then dispose of the used tissue safely immediately.

**Why?** Droplets spread virus. By following good respiratory hygiene you protect the people around you from viruses such as cold, flu and COVID-19.

**If you have fever, cough and difficulty breathing, seek medical care early**

Stay home if you feel unwell. If you have a fever, cough and difficulty breathing, seek medical attention and call in advance. Follow the directions of health authorities.

**Why?** Calling in advance will allow your health care provider to quickly direct you to the right health facility. This will also protect you and help prevent spread of viruses and other infections.

**Stay informed and follow advice given by your healthcare provider**

Stay informed on the latest developments about COVID-19. Follow advice given by your healthcare provider, your national and local public health authority or your employer on how to protect yourself and others from COVID-19.

**Why?** National and local authorities will have the most up to date information on whether COVID-19 is spreading in your area. They are best placed to advise on what people in your area should be doing to protect themselves.

**Protect ourselves and our loved ones against #COVID19:**

- ↪ **Wash your hands frequently**
- ↪ **Cover coughs and sneezes**
- ↪ **Avoid touching your face**
- ↪ **Avoid crowded places and limit time in enclosed spaces**
- ↪ **Keep a distance of at least 1 metre from others**
- ↪ **Use of mask is imperative when physical-distancing is not possible.**
- ↪ **Regularly clean and disinfect frequently touched objects and surfaces**

👉 **Isolate yourself from others if feeling unwell and seek care, if needed**
