

WHO Global Clinical Platform for Mpox

Data for public health response

WHO Global Clinical Platform for Mpox

Acknowledgment

Produced on 29 August 2024

The WHO Global Clinical Platform for Mpox is dedicated to enhancing the understanding and management of mpox through the analysis of anonymized clinical data from patients. Our goal is to support both the clinical care of patients and the broader public health response.

As of August 29, 2024, we are grateful to the following healthcare facilities and collaborators around the world who have generously contributed their clinical data or showed interest in our platform (listed alphabetically). A heartfelt thank you to each of these contributors for their valuable support and partnership, for making a significant impact on global health, and for advancing our collective response to this important challenge.
